Work Experience

Software Developer @ FIS Global, Remote

Aug 2021 - Present (37 months) | Full-time

- The project was on US Banking Domain where collaborated with a team on creating a website and its backend using technologies like: .Net core , Angular, Microservices, SQL Server
- Developed web APIs using .NET Core technology for a US Banking client. Implemented microservices architecture with the CQRS pattern, increasing scalability by 30%, making it fault tolerant and worked with SQL Server to manage database tasks and optimizing query performance. Collaborated with a team to design and implement user interfaces using the Angular framework, ensuring a responsive and user-friendly experience. Contributed to the development of an identity server for secure authentication and authorization within the web application. Followed SAFe (Scaled Agile Framework) practices in product development, facilitating collaboration and improving project delivery timelines. Collaborated with cross-functional teams to design and deliver user-friendly UIs, improving customer satisfaction.
- Web application that helps clients track, control, and report on customer communications.

Skills Developed: .NET, ASP.NET, SQL, Angular, API, Typescript
